01 WHY 3D VISUALISATION?

There are several ways to visualise your products, and various benefits of these techniques. The reason to visualise your products is so that you can gain new customers but also to keep your current ones. Two different visualisation techniques that can be used are photo-realistic images, that are computer-generated. Which technique you choose depends on what you want to achieve but this technique is based on 3D models of your product.

Photo-realistic images are produced in the same manner as you would do in a physical photo studio, the only difference is that everything is fabricated digitally. Meaning that everything needed to make a good-looking image such as lights, camera and above all the products themselves needs to be produced in a 3D environment. Industries that use these techniques are for example architects and real estate agencies. They use computer generated realistic images (3D models) of apartments, environments and interiors that are not yet built to be able to visualise and show future clients. In this way they are able to shorten the sales process and also minimize costs.

Inspirational realistic images to visualise an interior or exterior of a not yet built building.

Overviewing images to visualize and get a better view of how rooms in a building are connected and how office spaces are linked.

Visualization of volume – to be able to show big spaces and what is possible to arrange within these spaces.

This is of course something that is highly usable also in other industries. All companies that wish to shorten their process and minimize time and money spent on planning can gain from 3D-visualizations because it is something you can do very early in a project.

Let's go create.

RECOMMENDATIONS

It means the world to us that we get good feedback from our clients. Here are a few comments from some past happy customers.

Images and recommendations via linkedin

GARY SEAWARD **PRESTIGE SAUNAS**

I have used jb3d to Render projects from drawings to show clients what the finished project would look like. jb3d produced real life like images giving a feel of the project to the client prior to building the units. Very clean work delivered perfectly.

ERIN LEE **DROM UK**

It was a pleasure to work with jb3d on a number of new ever changing concepts. They wasn't phased by the numerous alterations required throughout the modelling process. The final results were very pleasing and we have had good interest in the new designs. We look forward to generating some more images in the future.

GARY PHILIPSON **CREATING CALM** **INTERIORS**

Creating Calm Interiors hired jb3d to update and create new data sheets. jb3d responded well to our requirements and we will be using them again.

If you require a efficient, professional service I strongly recommend you do the same.

The background of the image is a pattern of overlapping circles in various shades of teal and dark blue. The circles are of different sizes and are arranged in a way that creates a dense, abstract texture. The text is centered over this pattern.
